Project Name	Rising Waters
Maximum Marks	2 Marks

Customer Journey Map

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	• Opens the Rising Waters web application. • Reads the project description. • Clicks Predict Flood.	• Enters weather parameters (annual rainfall, cloud visibility, seasonal rainfall, etc.). • Clicks the Predict button. • Waits for the prediction.	• Views the flood prediction result. • Checks the flood probability and risk level. • Uses the prediction for planning and safety measures.
Touchpoint <i>What part of the service do they interact with?</i>	• Home page. • Navigation menu. • Predict Flood button.	• Prediction input form. • Flask backend. • Best trained Machine Learning model.	• Result page (Flood Prediction). • Flood probability and risk level. • Prediction summary.

Customer Thought <i>What is the customer thinking?</i>	• "Can this system accurately predict floods?" • "Is it easy to use?" • "Will this help me prepare?"	• "I hope I entered the correct values." • "The prediction should be quick." • "I want reliable results."	• "Now I know the flood probability." • "I can take preventive measures." • "This system supports early flood preparedness."
Customer Feeling <i>What is the customer feeling?</i>	• Curious. • Hopeful. • Interested.	• Focused. • Expectant. • Confident.	• Relieved (if low risk). • Alert (if high risk). • Satisfied with the prediction results.
Process Ownership <i>Who is in the lead on this?</i>	Project Team / Frontend (Flask UI)	Backend & Machine Learning Model	Prediction System & End User
Opportunities <i>How can we improve this stage?</i>	• Improve UI design. • Add user guide. • Make the interface mobile-friendly.	• Add automatic weather data integration. • Validate user input. • Reduce prediction time.	• Display detailed prediction insights. • Provide flood safety guidelines. • Add SMS/Email alerts and location-based notifications (Future Enhancement).
