

Brainstorming & Idea Prioritization Template

Date	24 June 2026
Team ID	
Project Name	Rising Waters
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Annam Lasya	Predict flood risk using historical weather and rainfall data	Machine Learning	1
2	Annam Lasya	Use meteorological parameters (temperature, humidity, rainfall, cloud cover) for prediction	AI/ML	1
3	Batta Kusumamba	Compare multiple ML algorithms (Decision Tree, Random Forest, KNN, XGBoost)	Machine Learning	2
4	Batta Kusumamba	Select the best-performing model based on F1-score and accuracy	Machine Learning	2
5	Guravaiah Katta	Develop a Flask-based web application for flood prediction	Web Development	3
6	Guravaiah Katta	Display flood probability and risk level (Low/Moderate/High/Severe) through an interactive web interface	Web Development	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Brainstorming & Idea Prioritization Template

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Flood prediction using weather and rainfall parameters	High	High	3	No
2	Develop and compare multiple ML models, selecting the best model for prediction	High	High	2	Yes
3	Build a Flask-based web application for real-time flood prediction and visualization	High	High	1	Yes
